

Creating and Routing a new Page

1. Create your page inside “pages” folder e.g. ‘orders_page.dart’ or Copy any existing dart file inside this folder and rename
2. Add page-title to ‘page_titles.dart’ file, example:
`static const String orders = 'My Orders';`
3. Add your routing config in ‘page_names.dart’:
`static const String orders = '/orders';`
4. Register your route in ‘main.dart’ inside ‘routes’ Object:
`RouteNames.orders: (_) => const OrdersPage(),`
